1. OVERVIEW

HAT162 ATS Controller is suitable for no breaking two stage ATS. It can accurately detect 2-way-3-phase voltage and judge voltage abnormal (such as over voltage, under voltage, over frequency, under frequency, lack of phase and phase rotation), and then control ATS to switch. When ATS switches abnormally, the controller can detect close/open failure and alarm on the front panel to ensure the correct action of ATS. In auto mode, if source 1 failure, controller will send signal to start the genset. Moreover, it can also realize remote communication, remote control and parameter configuration functions via LINK port communication.

2. PERFORMANCE AND CHARACTERISTICS

HAT162 controller can detect 2-way voltage (2-way mains, 1-way mains and 1-way gen) and control ATS.

Mains characters are as below,

- It is suitable for AC system with 3-phase 4-wire, 2-phase 3-wire, single phase, 3-phase
 3-wire(special order required);
- "Source 1 Main (auto transfer and restore)", "Source 2 Main (auto transfer and restore)", and "No Main Use (auto transfer and non-auto restore)" power supply methods;
- Measuring and displaying 2-way voltage and frequency:

1# 2#

Phase voltage (Ua, Ub, Uc)

Phase voltage (Ua, Ub, Uc)

Line voltage (Uab, Ubc, Uca) Line voltage (Uab, Ubc, Uca)

Frequency Hz Frequency Hz

- With over/under voltage, over/under frequency, loss of phase, and phase rotation detection functions;
- Breaker close fail alarm indication;
- LEDs on the panel can clearly display ATS working status;
- Auto/Manual mode can be switched. In manual mode, ATS can be switched by pressing front panel button;
- With manual commissioning function;
- Applicable for 2 isolated neutral line.
- Close output can be configured as pulse and continuous output;
- Parameter setting: parts of parameters can be adjust from front panel; all can be adjust via LINK port(with SG72 adaptor) by using computer software;
- Digitization adjustment of parameters (abandon simulation adjustment of regular potentiometer, and enhanced reliability and stability);
- Modular design, self extinguishing ABS+PC plastic shell, pluggable terminal, and compact structure;
- Three installation ways: panel built-in, internal 35mm slideway installation and internal screw mounting.

HAT162 ATS Controller 2018-05-10 Version 1.0 Page 4 of 21

3. SPECIFICATION

Table 2 – Specification Parameters

| Items | Contents | | | | |
|---------------------------|---|--|--|--|--|
| Operating Voltage | AC power A1N1/A2N2 supply. | | | | |
| Operating Voltage | Rated AC240V (range: AC170V~277V) | | | | |
| Power Consumption | Under rated voltage, power consumption is not more than 3VA | | | | |
| AC Voltage Input: | | | | | |
| 3-phase 4-wire | AC170V – AC277V (ph-N) | | | | |
| 2-phase 3-wire | AC170V – AC277V (ph-N) | | | | |
| Single phase 2-wire | AC170V – AC277V (ph-N) | | | | |
| 3-phase 3-wire | AC170V – AC277V (ph-ph) (special order required) | | | | |
| AC Frequency | 50/60Hz | | | | |
| 1# Close Relay | 16A AC250V Volt free output (Normally open) | | | | |
| 2# Close Relay | 16A AC250V Volt free output (Normally open) | | | | |
| Oil Engine Start Relay | 7A AC250V Volt free output (Normally close) | | | | |
| Programmable Output Relay | 7A AC250V Volt free output (Normally open) | | | | |
| Communication | LINK interface, MODBUS-RTU Protocol | | | | |
| Case Dimensions | 86.9mmx158mmx119.5mm | | | | |
| Panel Cutout | 73.5mmx144mm | | | | |
| Working Conditions | Temperature: (-25~+70)°C; Relative Humidity: (20~93)%RH | | | | |
| Storage Condition | Temperature: (-25~+70)°C | | | | |
| Destantion I avail | IP65: when water-proof gasket installed between control panel and | | | | |
| Protection Level | enclosure. | | | | |
| | Apply AC2.2kV voltage between high voltage terminal and low voltage | | | | |
| Insulation Strength | terminal; | | | | |
| | The leakage current is not more than 3mA within 1min. | | | | |
| Weight | 0.6kg | | | | |

4. OPERATION

4.1 FRONT PANEL DESCRIPTION

4.3 INDICATOR DESCRIPTION

Table 4 - Indicator Description

| Indicators | Description | | | | | | | | |
|-------------------|---|--|--|--|--|--|--|--|--|
| | Lamp illuminates: 1# power normal | | | | | | | | |
| 1# Power | Lamp flashes: 1# power abnormal (over/under voltage, over/under | | | | | | | | |
| I# Fower | frequency, loss of phase, and phase rotation) | | | | | | | | |
| | Lamp off: 1# loss of power | | | | | | | | |
| | Lamp illuminates: 2# power normal | | | | | | | | |
| 2# Power | Lamp flashes: 2# power abnormal (over/under voltage, over/under | | | | | | | | |
| Z# POWel | frequency, loss of phase, and phase rotation) | | | | | | | | |
| | Lamp off: 2# loss of power | | | | | | | | |
| 1# Main | Lamp illuminates: 1# Priority (auto | | | | | | | | |
| I# Wall | transfer and restore) Both illuminates: "mutual backup" (auto | | | | | | | | |
| 2# Main | Lamp illuminates: 2# Priority (auto transfer and non-auto restore)" | | | | | | | | |
| Z# IVIdII I | transfer and restore) | | | | | | | | |
| 1# Close | Lamp illuminates: 1# Supply | | | | | | | | |
| 2# Close | Lamp illuminates: 2# Supply | | | | | | | | |
| Alarm | Lamp illuminates: 1# or 2# Close fault | | | | | | | | |
| Auto/Manual Mode | Lamp illuminates: controller in Auto mode | | | | | | | | |
| Auto/Mariual Mode | Lamp off: controller in Manual mode | | | | | | | | |
| Genset Status | Lamp illuminates: genset start signal outputs | | | | | | | | |
| Gensel Status | Lamp flashes: genset start signal de-energized | | | | | | | | |

4.4 OPERATION

4.4.1 AUTO/MANUAL MODE SWITCH

When the controller is normally working, if auto/manual mode indicator is off, it means controller is in manual mode; it can switch into auto mode by pressing, the indicator will be normally light; then press again to switch back to manual mode.

Note: after repower-on, controller mode depends on the mode in which the controller was last powered down. When the controller is powered off in manual mode, the controller is still in manual mode after repower-on.

4.4.2 MANUAL OPERATION

When controller is in manual mode, if press , 1# close relay outputs, and 1# close status indicator illuminated when 1# close status input detecting is active, and then 1# supply ramps on load; if press , 2# close relay outputs, and 2# close status indicator illuminated when 2# close status input detecting is active, and then 2# supply ramps on load.

4.4.3 AUTO OPERATION

In auto mode, controller can switch between 1# supply and 2# supply automatically.

HAT162 ATS Controller 2018-05-10 Version 1.0 Page 7 of 21

4.4.4 MANUAL TEST

In manual mode, when genset start signal is active, press can deactivate the genset start signal.

When genset start signal is inactive, press can active the genset start signal.

5. CLOSE FAULT ALARM

Braker close fault devided into 1# supply breaker close fault and 2# supply breaker close fault. After the controller send a breaker close fault alarm, alarm indicator flashes.

Process of trigger 1# supply close fault alarm is as below:

When 1# supply voltage is normal, controller will initiate an command of close 1# supply; if 1# close input signal cannot be detected, 1# supply will be open and close again. If controller still cannot detect the 1# close signal, it will be regarded as 1# close failure and the alarm indicator illuminates at the same time. Meanwhile, if 2# supply voltage is normal and doesn't occur close fault, then 2# power will be closed.

Process of trigger 2# supply close fault alarm is as below:

When 2# supply voltage is normal, controller will initiate an command of close 2# supply; if 2# close input signal cannot be detected, 1# supply will be open and close again. If controller still cannot detect the 2# close signal, it will be regarded as 2# close failure and the alarm indicator illuminates at the same time. Meanwhile, if 1# supply voltage is normal and doesn't occur close fault, then 1# power will be closed.

Reset close fault alarm: after alarm occurs, switch controller to manual mode to reset alarm. This moment, troubleshooting and ATS transfer test can be carried out.

NOTE: after reset alarms, the fault must be checked and cleared.

HAT162 ATS Controller 2018-05-10 Version 1.0 Page 8 of 21

6. WIRE CONNECTION

Fig.2 – Controller Rear Panel Drawing
Table 5 – Terminals Description

| No. | Items | Function Description | Remark | | | |
|-----|----------------|----------------------------|---|--|--|--|
| 1 | N2 | | Single phase 2-wire: connect with A2 and N2, | | | |
| 2 | C2 | | B2 and C2 are not connected; | | | |
| 3 | B2 | 2# AC 2 phase 4 wire input | 2-phase 3-wire: connect with A2, B2, and N2, | | | |
| | | 2# AC 3-phase 4-wire input | C2 is not connected; | | | |
| 4 | A2 | | 3-phase 3-wire: connect with A2, B2, and C2, | | | |
| | | | N2 is not connected (special order required). | | | |
| 5 | N1 | | Single phase 2-wire: connect with A1 and N1, | | | |
| 6 | C1 | | B1 and C1 are not connected; | | | |
| 7 | B1 | 1# AC 2 phase 4 wire input | 2-phase 3-wire: connect with A1, B1, and N1, | | | |
| | A1 | 1# AC 3-phase 4-wire input | C1 is not connected; | | | |
| 8 | | | 3-phase 3-wire: connect with A1, B1, and C1, | | | |
| | | | N1 is not connected (special order required). | | | |

8. PARAMETERS SETTING

8.1 PARAMETERS SETTING MODE

In manual mode, enter into parameters setting mode by pressing for 8s and manual/auto indicator and gen status indicator flash; ①, ②, ③, ④ indicators illuminate. LED numbers please to see the following picture.

Fig.3 – Parameter Configuration

ANOTE: At this moment, press will be back to normal mode after LED flash.

8.2 PARAMETERS SETTING

When it entered into parameter setting mode, users can adjusting parameters by pressing. And and TLEDs are illuminated. 1, 2, 3, 4 indicators mean setting items numbers (currently item number is 1); 5, 6, 7 indicators mean these parameter values (currently parameter value is 1). Configurable parameter list please check "Table 6 – Parameters Definition and Range Table (1)" of item 7.

Specific settings are as below:

- 1) Select setting number which needs to adjust by pressing and 0;
- 2) Enter into setting status by pressing and ⑦ indicator flashes;
- 3) After set this parameter by pressing and and press the key to save the value.
- 4) Hold and press after all parameters are configured, and release when all LEDs flash, which means parameters are all saved and then will return to normal mode.

▲NOTE: See "Table 8 Parameter Value Comparison" for the values corresponding of LED indicators.

▲NOTE: after parameters configured completely, users need to press (ﷺ) to back to the normal mode to save the parameters. Otherwise, the setting parameters will be lost after controller power outage.

| • | 0 | | • | 11 | | | | |

8.3 RESET TO DEFAULT

In parameter setting mode, press , ①, ② and ③ LEDs illuminated, and ⑦ LED flashes.

After pressing LED illuminates for 2s, indicating that the factory value has been restored.

Meanwhile, all LEDs flash for 3 times and return back to the normal mode.

eariwille, all LEDS flash for 3 times and feturif back to the normal mode.

ANOTE: if needn't to restore to factory value, press (2) to return to the normal mode after LED flashes.

11. TROBLESHOOTING

Tale 9 - Troubleshooting

| Symptom | Possible Solutions |
|----------------------------|---|
| Controller inoperative | Check connections and voltages of 1# and 2# power; |
| | Check F1 or F2 fuse |
| Controller displays normal | Check ATS; |
| but switch not activate | Check the connections between controller and ATS. |
| 1# or 2# power LED flashes | Check whether AC voltage is normal or not. |
| Alarm LED flashes | If switch close failure alarms, please check switch auxiliary contact wiring. |

HAT162 ATS Controller 2018-05-10 Version 1.0 Page 21 of 21
